

Aditya Pokharkar +91 - 7888194426 Pune, Maharashtra neonpokharkar@gmail.com Linkedin Full Stack Developer with 3+ years of experience at Bank of America subsidiary, focused on building scalable backend systems and intuitive frontend experiences. Strong problem solver with deep interest in AI/ML and product innovation. Seeking opportunities to build impactful products.	
Education	
- Indian Institute of Technology, Varanasi (IIT BHU) - <i>Bachelor of Technology in Mechanical Engineering</i> - <u>8.72 CGPA (2018 - 2022)</u> - Modern Colleges of Arts Commerce And Science, Shivajinagar (12th) - <i>Science</i> - <u>86.4% Marks (2016 - 2018)</u> - New English School, Landewadi (10th) - <i>State Board (SSC)</i> - <u>93.7% Marks (2003 - 2016)</u>	
Work Experience	
Bofa Continuum (A non Banking Subsidiary of Bank of America) <i>Software Engineer I (June 2022 - Present)</i> <u>Mumbai, Maharashtra</u> - Spearheaded development of an Enterprise-wide Workflow Application using Java and Angular, delivering full-stack solution from scratch that went live in 8 months - Developed and Maintained 50+ Backend REST APIs to power Real-time and form-driven functionalities across the application - Served as the Lead Backend Developer, owning API Design, Database Integration, and Performance Optimization Designed foundational Database Schema and established Spring Boot Architecture to enable modular and scalable backend services - Leveraged Aspect-Oriented Programming (AOP) to modularize cross-cutting concerns, reduce code duplication and improving maintainability - Built a dynamic Flexible Workflow Engine on Oracle DB to support runtime-configurable processes, improving adaptability to frequent requirement changes without requiring deployment - Integrated Websockets for Real Time Collaboration, enabling instantaneous live updates for multi-user form editing - Engineered Versioning and Locking Mechanisms to prevent data conflicts in Concurrent Form Submissions, Eliminating Deadlocks by 100% - Developed a Backend JSON Diff Utility to track 100+ Granular Field Level Changes across form versions - Delivered a Full-Stack Feature for Thread-Based Commenting using Angular, marking first major contribution across frontend and backend Owned the process of detecting and fixing Image Vulnerabilities, Contributing to more Secure and Stable Deployment - Participated in Production Deployments and Database Migrations using Datical (Liquibase-like tool) ensuring smooth CI/CD integration - Applied Caching Strategies, implemented Splunk-based JSON logging, XML Parsing, and robust error handling; contributed to clean code practices and unit testing	
Projects	
NBoard : Intuitive Indic Keyboard - Java Native Development (June 2020)	Genetic Algorithm : Timetable Scheduling for Universities - Java (May 2022)
Developed a Swipe-based Keyboard supporting 3+ Indic Languages with conjunct letter support. Engineered a Language-Agnostic structure to switch layouts through minimal file changes	Designed a Genetic Algorithm top optimise University Schedules , resolving constraints across student groups for efficient Time Table Generation
Skills	
Languages - Java, Typescript, Javascript, Dart, Python Frameworks/Technologies - Spring Boot, Angular, Flutter, Websockets, AOP, JUnit	Databases/Tools - Oracle, SQL, Splunk, Datical Concepts - Neural Networks, Genetic Algorithm Interests - Full Stack Application Development, AI/ML, Innovation
